

Acquisition prospectus

Confidential — for qualified acquirer diligence

1. EXECUTIVE SUMMARY

TeamSnap runs your season. SportsEngine runs your league. GotSport runs your state paperwork. SSTRacker runs your athletes' development — with the compliance architecture youth sports actually needs in 2026.

SSTRacker is a compliance-first youth sports development platform targeting clubs that have outgrown schedule-and-chat tools but cannot sacrifice SafeSport and COPPA rigor.

Acquisition thesis: buy a launch-ready functional OS with architectural moat (cell routing, household graph, RL homework path) rather than rebuild from TeamSnap/SportsEngine APIs.

Remaining work is owner live deploy confirm, FUNCTIONAL_MVP QA, and go-to-market — not greenfield product invention.

2. MARKET POSITION

At parity (functional): RSVP, registration-lite, roster invite, tryouts OS, eligibility matrix, parent calendar/push, PWA, payment installments, roster assign panel, tournament brackets.

Partial (accept v1): Capacitor native shell, NGB CSV export, live stream embed, Checkr embed, federation Phase 3 sync.

Behind: App Store / Play Store binaries (intentional — acquirer). Leads: Player development, COPPA/VPC, SafeSport DM policy, coach spatial drills, RL homework.

Platform	They win on · SSTRacker wins on
TeamSnap ONE	Parent mobile, RSVP, reg, streaming · Development loop, compliance depth
SportsEngine HQ	Eligibility matrix, NGB, enterprise reg · Player OS, SafeSport comms model
GotSport	State roster / governing body sync · Gamified development, RL, intent engine

3. PRODUCT SURFACES

Persona	Primary route · Status
Player	/player/dashboard · Shipped — HQ, Train, Armory, Stats
Parent	/parent/household · Shipped — VPC, co-op, bounties, messages
Coach	/coach · Shipped — Forge, drills, match-day, logistics
Director	/director · Shipped — compliance, field ops, registrars
Admin	/admin · Shipped — orgs, RL policy, system

4. TECHNICAL ARCHITECTURE

Canonical: docs/ARCHITECTURE.md · Deploy: docs/FUNCTIONS_DEPLOY.md

- Client — Svelte 5 (Runes) + SvelteKit PWA (adapter-static)
 - Edge — Firebase Hosting + /v1/** → apiGateway
 - Compute — Cloud Functions v2 across 7 codebases (core, rl, compliance, platform, commerce, integrations, legacy monolith)
 - Data — Isolated Firestore cells per tenant shard + registry DB
 - Invariants — zero-liability PII, strict tenant isolation, lazy read-repair migrations, Vanguard Trinity UI pattern
-

5. COMPLIANCE & TRUST

- VPC ceremony — parent-granted consent; consent_records + security_audit server-side
 - SafeSport — sendCoachPlayerMessage blocks coach→minor unsupervised DM
 - Minor retention — purge queue + scheduled burn (functions-compliance)
 - WebAuthn / passkeys — parent magic-link → passkey enrollment path
 - Coach clearance — Checkr embed + director panopticon; NCSI vendor parity = acquirer
-

6. DIFFERENTIATED FEATURES

- Coach Intent Engine + Train lock — prescription-locked sessions with editable session notes only
 - Tryout lifecycle OS — public registration through roster promote + automated comms
 - RL adaptive homework — HQ mount + callables; launch default abPercent: 0 (heuristic only)
 - Spatial drill designer — team + club libraries persisting to teams/{teamId}/drills
-

7. BUILD & QUALITY STATUS

Signal	Status
Functional audit A–F	Done
LAUNCH Wave 0–2	Done
Overnight P2 + check=0	Done — merged dev 2026-06-13
Wave 3A + 3B	Done
Wave 4 competitive parity	Done — 2026-06-15
Owner human QA on FUNCTIONAL_MVP	Pending
TypeScript npm run check	0 errors — CI gate

8. WHAT ACQUIRER GETS

- Full monorepo — SvelteKit app, 7 function codebases, Firestore + storage rules
- Vision + sprint docs under docs/vision/
- Test suite — Vitest guards, Firestore rules emulators, Playwright e2e scaffold
- QA provisioning — scripts/dev-tenant-reset.mjs
- Dev QA: sports-skill-tracker-dev → <https://sstracker.app>

9. REMAINING LAUNCH WORK (POST-ACQUISITION)

- Owner live deploy confirm if callables not yet live on dev
- Owner QA — OWNER_QA_CHECKLIST Phase 0–4
- Deferred — avatar PNG art, platform visual redesign, federation API Phases 2–4 (owner GTM)
- Acquirer — App Store / Play Store binaries, NCSI vendor parity, club website CMS (rejected)

10. RISK FACTORS

- Pre-revenue / pre-scale user base
 - Firebase vendor concentration
 - Split codebase deploy complexity
 - Federation API Phases 2–4 gap vs GotSport for state-governing-body GTM
 - No club website builder (intentional)
 - App Store / Play Store distribution (intentional — acquirer)
-

11. CONTACT & DATA ROOM

Acquisition inquiries: acquisition@sstracker.com

QA tenant: club_qa_launch_2026 — provision via `node scripts/dev-tenant-reset.mjs --provision`

Data room index: <docs/acquisition/INDEX.md>
