

Executive brief

TeamSnap runs your season. SportsEngine runs your league. GotSport runs your state paperwork. SSTRacker runs your athletes' development — with the compliance architecture youth sports actually needs in 2026.

PROBLEM

Youth sports clubs use TeamSnap or SportsEngine for schedules, RSVPs, and payments — then bolt on spreadsheets, group texts, and waiver PDFs for athlete development and minor safety.

No incumbent owns the loop from coach intent → player training → XP → parent visibility with COPPA-native architecture.

SOLUTION

SSTRacker is a multi-tenant SaaS platform (Player · Parent · Coach · Director) on SvelteKit 5 + Firebase.

- Player OS — missions, Train logging, XP/skill tree, coach bounties, RL adaptive homework
- Parent OS — household graph, VPC ceremony, co-op logging, SafeSport-gated messaging
- Coach OS — Intent Engine, spatial drill designer, match-day, tryout lifecycle
- Director OS — eligibility matrix, field ops, compliance audit, registration

MOAT (HARD TO COPY)

Capability	Why it matters
Train → XP → coach intent loop	Daily engagement competitors lack
Household-gated comms	No coach→minor unsupervised DM (rules + callables)
VPC + consent records + minor retention	COPPA depth beyond checkbox waivers
Cell-isolated Firestore	Federation-scale tenant blast-radius control
RL adaptive homework (Epic 8)	Policy/heuristic drill queue on player HQ

TABLE STAKES (SHIPPED IN CODE)

RSVP · registration-lite + Stripe path · roster invite · tryouts OS (reg → eval → callback → roster) · eligibility matrix · parent push/calendar · PWA install · payment installments · drag-drop roster assign · tournament brackets (single + double-elim).

TRACTION & STAGE (HONEST)

Signal	Status
Paying clubs / MAU / ARR	None documented · pre-commercial · \$0 ARR
LAUNCH Wave 0–2	Done
Wave 3A gap closure + 3B deploy smoke	Done
Wave 4 competitive parity	Done — 2026-06-15
Owner FUNCTIONAL_MVP QA	Pending
Live QA environment	https://ssstracker.app (sports-skill-tracker-dev)

WAVE 4 WINS

- Checkr clearance lifecycle: Webhooks + director panopticon matrix — NCSI vendor swap remains acquirer decision.
- Registration roster assign: GotSport-style drag-drop panel wires season registration to roster placement.
- Tournament brackets: Single- and double-elimination panels on tournament events.
- Federation Phase 3 sync: CSV v1 export plus Phase 3 sync path — not 38-body live API parity.
- Live stream embed: URL embed MVP on team workouts and match sessions — CDN tooling on schedule, not shipped as native CDN.

INTENTIONAL LIMITATIONS

- Club website builder (Not building) — Public /register, /tryouts, and /club/{slug} routes replace drag-and-drop CMS.
 - Native app store binaries (Capacitor MVP) — PWA + web shipped; store submission is acquirer-operated post-close.
 - Federation API (38 bodies) (CSV v1 + Phase 3 sync) — State roster export and Phase 3 federation sync shipped; GotSport-grade live API remains Partial.
 - Live streaming CDN (Embed MVP) — YouTube/Vimeo/Mux URL on events and match sessions — not TeamSnap-class native CDN or broadcast schedule tooling.
 - Registration → roster UX (Shipped) — Drag-drop assign panel ('RegistrationRosterAssignPanel') closed Wave 4 — not a gap.
 - Tournament brackets (Shipped) — Single- and double-elimination on 'TournamentBracketPanel' — Wave 4 Done.
-

STACK & DILIGENCE

Svelte 5 Runes · SvelteKit · Firebase (Auth, Firestore cells, Functions v2, Hosting, FCM) · Stripe · Vitest · Playwright
